TITLE: Automatically controlled vibration equipment  
type "Turbo 4"

PERIODICAL: Referativnyy zhurnal, otdel'nyy vypusk, Izmeritel'naya  
tekhnika, no. 21, 1962, 12-13, abstract 32.21.101.  
(Kovoexport (Czech SSR), v. 8, no. 3, 1962, 18-22)

TEXT: The "Turbo-4" equipment is manufactured by the  
Elektropodnik Works, Czechoslovakia. It is intended for the  
experimental determination of natural frequencies and fatigue  
limits of turbine blades. Operation of the equipment is based on  
indirect excitation of oscillations in the test piece, fixed to  
one arm of the vibrator, which is of U-shape and has a laminated  
armature to reduce eddy currents. The electromagnet used for  
excitation is fixed to the other arm. The magnetic circuit is  
closed through an air gap which does not exceed 1 mm. The  
instrument has advantages over mechanical and electromagnetic  
excitation devices. 6 figures.

TITLE:

Homogeneous functionals on locally compact semimodules

PERIODICAL: Referativnyy zhurnal, Matematika, no. 12, 1961, 91-92,  
abstract 12B413. ("Casop. peštov. mat.", 1960, 85, no. 1,  
96-98)

TEXT:

As a semimodule  $\mathcal{D}$  the author denotes a subset of a linear space  $\mathcal{L}$  which is closed relative to addition and multiplication with nonnegative numbers; moreover, it is assumed that if  $x + y = 0$  and  $x, y \in \mathcal{D}$ , then  $x = 0$  and  $y = 0$ ; this allows to introduce a partial order in  $\mathcal{D}$  by putting  $x \leq y$ , if  $y - x \in \mathcal{D}$ . Furthermore, it is assumed that  $\mathcal{L}$  is topologized and that  $\mathcal{D}$  is closed and locally compact in  $\mathcal{L}$  in the sense that there are zero neighborhoods in  $\mathcal{L}$  with the property that the closure of their intersections with  $\mathcal{D}$  is compact. On  $\mathcal{D}$  positive homogeneous functionals  $\varphi(x)$  are considered, i. e. such that  $\varphi(x) > 0$  for  $x \neq 0$  and  $\varphi(\alpha x) = \alpha \varphi(x)$  for  $\alpha > 0$ . In the set  $P$  of all such functionals a distance is introduced with the aid of the formula

X

Card 1/5

32883

Homogeneous functionals on locally ...  
 attains its minimum  $\varphi(\Phi)$  on a certain linear functional  $\Psi = \Psi(x)$  and  
 $\Psi = v(x)$  which is determined as follows:

S/044/61/000/012/039/054  
0111/C333

On a certain dense subsemimodule  $\mathcal{V}' \subset \mathcal{V}$  bounded linear functionals

$$\bar{\Psi}(x) = \lim_{n \rightarrow \infty} \left[ \sup \sum_1^n \varphi(y_i) \right]$$

$$\bar{v}(x) = \lim_{n \rightarrow \infty} \left[ \inf \sum_1^n \varphi(y_i) \right]$$

are constructed, where  $\sum_1^n y_i = x$  is an arbitrary decomposition of  $x$   
 into  $n$  summands; the continuous extensions  $\Psi(x)$  and  $v(x)$  of  $\bar{\Psi}(x)$  and  
 $\bar{v}(x)$  are the sought best linear approximations of the functional  $\varphi(x)$ .  
 The condition mentioned relative to  $\mathcal{V}'$  says that  $\mathcal{V}'$  must contain an  
 everywhere dense subsemimodule  $\mathcal{V}$  being the union of an increasing  
 sequence of subsemimodules which contain with every  $x$  all smaller  
 elements of  $\mathcal{V}$  and have the property that if

"Age Differences in Higher Nervous Functions in First Months of Postnatal Life."

Prague, Activitas Nervosa Superior, Vol 5, No 4, 1963, pp 407 - 410

Abstract: At the end of the 2nd and beginning of the 3rd month we notice characteristic changes in the frequency of the conditioned palpebral reflexes and in the conditioned reflex to food stimuli. These facts show that at this age a deep change of higher nervous functions takes place. 2 Figures, 2 Tables, no references. Submitted at the Medical Congress in Prague, November 1962.

TITLE: Individual differences in discrimination learning in infants [This paper was presented at the Third Interdisciplinary Conference on Experimental and Clinical Study of Higher Nervous Functions held in Marianske Lazne from 19 to 23 October 1964.]

SOURCE: Activitas nervosa superior, v. 7, no. 2, 1965, 138-140

TOPIC TAGS: man, psychology, behavior pattern, acoustic biologic effect

ABSTRACT: Experiments on 65 healthy infants showed that acoustical stimulus was formed in the first 6 months of life. The speed of reaching the criterion of discrimination varied between 6 and 41 days, and declined with age. Individual differences were very high. In some cases discrimination was shown immediately, so that a learning process could not have been involved. Orig. art. has: 1 table and 1 figure. [JPRS]

"Comparison of Appetitional and Aversive Conditioning in the Same Infants."

Prague, Activitas Nervosa Superior, Vol 8, No 2, Jun 66, pp 203-204

Abstract: 130 children were studied by two methods: appetitional (the conditional head turning) and aversive (the conditional eyelid response). In the appetitional method the criterion conditioning was reached in 13.5 days, in the palpebral method in 19 days. Changes in the functional quality manifested by the establishment of the conditional reflex depends on the age of the infant. 1 Figure, no references. Submitted at the 4th Conf. of Exper. and Clin. Study of Higher Nerv. Functions at Mar. Lazne, 12-15 Oct 65. Article is in English.

✓ 1001. The chromatographic determination of the uranium content of Hungarian coal-ash  
Srommingh, L., Faridy and Jánosz (Univ. Cluj,  
Inst. Veszprém, Hungary). Magyar Kém. Foly.  
1955, 62 (10), 312-314. For coal-ash containing  
40 to 60 per cent. of  $\text{SiO}_2$ , the method of Uystein  
and Wells (Analyst, 1951, 76, 388) has been used,  
with the following modifications. Whatman used  
less paper No. 214 is cut into squares (16 mm x  
10 mm), 10 g of this paper are activated with 5 per  
cent.  $\text{HNO}_3$  (6 ml) by heating it to boiling for 5  
min. and then boiling for a further 20 min. The  
pulp is washed successively by suction with 3  
absolute ethanol (90 ml) and anhydrous  $\text{H}_2\text{O}$   
(150 ml). The coal-ash (2 to 3 g, ignited at 600°C)  
is fused in a platinum crucible with eight times its  
wt. of  $\text{Na}_2\text{CO}_3$ - $\text{K}_2\text{CO}_3$  and the residue is taken up  
in conc.  $\text{HNO}_3$ , and twice evaporated to dryness in  
a platinum dish (the use of porcelain leads to loss  
of 20%

J. Szonntagh

ot uranium). The residue is then dissolved in HNO<sub>3</sub> (20 ml), filtered, washed with HNO<sub>3</sub>, evaporated to dryness and taken up in several portions (10 to 20 ml each) of ether-HNO<sub>3</sub> (95:5 by vol.) and transferred to the column, which is then washed with several portions of the solvent (total, 100 ml). The uranium is determined photometrically, by diluting the soln. with an equal vol. of H<sub>2</sub>O, distilling off the ether and concentrating the soln. to a small vol. in a platinum dish. Conc. H<sub>2</sub>SO<sub>4</sub> (2 to 3 ml) is added and the soln. is heated till fumes of SO<sub>2</sub> appear. To the cooled soln., diluted to  $\approx$  25 ml and filtered, 10 per cent. K<sub>4</sub>Fe(CN)<sub>6</sub> (5 ml, containing 1 per cent. of Na<sub>2</sub>S) is added and the soln. is diluted to 60 ml. After 15 min., the extinction is measured photometrically at 5461 Å, with a 10-mm cell. The compensating soln. contains Na<sub>2</sub>S and K<sub>4</sub>Fe(CN)<sub>6</sub>. The calibration curve is prepared with uranyl nitrate. Reproducibility is within  $\pm$  15 per cent. A. G. Pato

TITLE: Investigations in the field of solid-state radiation polymerization.<sup>1</sup> Part 10:  
Copolymerization of vinyl chloride-acetate and acrylic acid<sup>1</sup>

SOURCE: Magyar kemial folyoirat, v. 71, no. 10, 1965, 447-450

TOPIC TAGS: radiation polymerization, copolymerization, vinyl chloride, acrylic acid

ABSTRACT: The copolymerization of vinyl chloride-acetate and acrylic acid is characterized in the liquid state by the copolymerization constants. The phase diagram of the solid system of this pair of monomers has an eutectic point at the composition corresponding to a 62 mole-% vinyl chloride-acetate content. The copolymerization rate in the solid state is at a maximum at the eutectic point and the copolymer formed has the composition of the eutectic mixture. In the supercooled liquid state the rules governing the copolymerization are similar; however, the rate of the process is ten times as high as in the solid state.

"In Vitro Study of Absorption in the Small Intestine After Supralethal X-Ray Irradiation"

Budapest, Kiserletes Orvostudomany, Vol 18, No 6, 1966; pp 619-626.

Abstract: The functional disturbances developed 24, 48 and 72 hours after a total-body irradiation with 1500 r, and the water-, sodium-, chloride and glucose absorption were investigated with the aid of in vitro technique. At 24 hours the absorption of all substances was increased, at 48 hours the absorption was strongly decreased, at 72 hours the absorption was very strongly decreased. The ionic concentrations of the absorbed liquid approach the concentration values of the perfusion (Krebs) solution in proportion to the severity of the epithelial injury and the decrease of water transport.
